OBJECTIVE

Computer Science graduate with hands-on experience designing and developing user-facing applications across AI, recommendation, and interactive systems. Experienced with Figma, UI development, independent UX research, responsive design, accessibility, and user-centered application workflows, alongside strong technical skills in React, TypeScript, JavaScript, Python, and REST APIs. Interested in applying technical implementation, UX thinking, and analytical problem-solving to build simple, accessible, and intuitive experiences for diverse users.

EDUCATION

B.Tech, Computer Science & Engineering Aug 2022 – June 2026
Shri Ramswaroop Memorial College of Engineering & Management, Lucknow
◦ Relevant Coursework: Data Structures, Algorithms, Operating Systems, DBMS, Artificial Intelligence, Machine Learning
Senior Secondary (Class XII) 2021
Central Academy, Lucknow Aggregate: 86.8%

SKILLS

UX / UI & Design: Figma, UI Design, UX Research, User-Centered Design, Interaction Design, Responsive Design, Accessibility, Prototyping
Frontend & Application Development: React, TypeScript, JavaScript, HTML5, CSS3, Python, Flask, REST APIs
AI & Data: Scikit-learn, PyTorch, TensorFlow.js, NumPy, Pandas, OpenCV, Model Evaluation, Data Analysis
Tools & Platforms: Git, GitHub, GitLab, Docker, Unix/Linux, VS Code
Databases: MongoDB, MySQL
Professional: Communication, Teamwork, Problem-Solving, User-Focused Thinking, Requirements Understanding, Technical Documentation

EXPERIENCE

Full Stack Development Intern Sept 2023 – Nov 2023
IBM (Remote)
◦ Built responsive React-based interfaces using HTML5 and CSS3, with emphasis on accessibility, usability, responsive behavior, and consistent user-facing interaction.
◦ Translated application requirements into reusable interface components and client-side workflows designed around clear user interactions.
◦ Integrated REST APIs with frontend workflows to connect interface components with application functionality and improve the overall user experience.
◦ Collaborated within a technical development environment to implement and refine user-facing application features.
Data Science Intern Oct 2024 – Dec 2024
IBM (Remote)
◦ Executed ETL pipelines using Python, Pandas, and SQL to clean, transform, and validate datasets, performing data-quality checks for reliable analytical outputs.
◦ Developed and evaluated ML models using Scikit-learn for regression, classification, and clustering, interpreting results with standard performance metrics.

PROJECTS

FITBUDDY – AI-Based Virtual Fitness Coach | *React, TypeScript, TensorFlow.js, LangChain* [Live Demo](#)
Collaborative Project
◦ Designed and developed a user-centered interactive fitness application combining real-time posture analysis, visual feedback, conversational assistance, and voice interaction.
◦ Applied independent UX research and user-focused design thinking to consider interaction needs, accessibility, feedback mechanisms, and ease of use while shaping the application experience.
◦ Built a real-time posture-correction workflow using MediaPipe BlazePose landmark detection and vector-based joint-angle analysis to provide exercise-form feedback.
◦ Integrated a LangChain-based conversational chatbot using Groq API/LLaMA 2 and DistilBERT intent classification to support natural user interaction.
◦ Added Whisper-based voice feedback for hands-free coaching interaction, supporting a more accessible experience during exercise.
HEARTUNE – Music-Based Matchmaking App | *Flask, MongoDB, JavaScript* [Live Demo](#)
Collaborative Project
◦ Co-developed a user-facing recommendation platform focused on personalized user experiences, matching users through playlist and genre preferences.
◦ Designed application workflows around user profiles, preferences, playlists, and match results to create an intuitive end-to-end interaction flow.
◦ Implemented Flask REST APIs and MongoDB data models supporting user profiles, playlist data, and custom affinity-scoring logic.
DITE – AI Diet Chart Generator | *Flask, MongoDB* [Live Demo](#)
◦ Built an AI-powered personalized diet recommendation system centered on capturing user preferences and generating tailored meal plans.
◦ Designed the application workflow from user input and preference capture through recommendation generation and persistent data storage.
◦ Designed the backend architecture and MongoDB persistence layer end-to-end, supporting personalized recommendation workflows in a deployed, user-facing application.
